# Instruction Sheet

Step 1. Slide Bolt Breaker over anchor bolt

Step 2. Make sure Bolt Breaker is resting on concrete prior to starting the the break off procedure.

Step 3. Establish an Ergonomically comfortable position

Step 4. Move Bolt Breaker back and' forth, then in a circular motion until bolt breaks free.

Step 6. Floor should now be ready to patch.

Step 5. Remove broken anchor from the end of the Bolt Breaker.

WARNING: READ ALL INSTRUCTIONS BEFORE USING THIS TOOL AND ALWAYS WEAR EYE PROTECTION AND PROPER FOOTWEAR

SAFETY WARNING & CAUTION

The "Bolt Breaker" is an ergonomically designed tool that can cleanly break off anchor bolts flush with the concrete so that the remaining part of the anchor can be smoothly patched over without any additional prep work required. By using this tool, the bolt breaking process can be done in a fraction of the time of other known methods.

This tool eliminates the need for the use of abrasive cut-off wheels, hammers or any other type of make-shift device that is normally used for this process. Each unit comes standard with two replaceable inserts (for 1/2" and 3/8" anchor bolts) and is available in either a long or short version. Additional inserts are available for bolt sizes 1/4", 5/8" and 3/4".

SAFETY WARNING & CAUTION:

READ ALL TOOL SPECIFIC INSTRUCTIONS BEFORE USING THIS TOOL
WEAR EYE, HAND AND FOOT PROTECTION
